Handbook of Inter-Rater Reliability, 5th Ed. Vol 1: Analysis of Categorical Ratings

Inter-rater reliability assessment has become an essential component in the process of evaluating the quality of experimental data in almost all fields of research. The 4th edition of the *Handbook of Inter-Rater Reliability* covered the analysis of categorical and quantitative ratings in a single volume. In response to comments on previous editions, the current 5th edition is released in 2 volumes. Volume 2 is devoted to the analysis of quantitative ratings, whereas the current volume 1 focuses on the analysis of categorical ratings.

Here is the link to the webpage of volume 1, where you can find, a link to the errata page, some example workbooks, and other datasets:

www.agreestat.com/books/cac5/

Here are a few topics that are new to the 5th edition:

- Chapter 2 describes various methods for setting up your dataset of ratings before analysis.
- New sample size calculation procedures for chance-corrected agreement coefficients are presented in chapter 6.
- Several new techniques for analyzing categorical ratings are described in chapter 9. Among these are the inter-annotator agreement, useful in Natural Language Processing, the testing of the difference of 2 agreement coefficients for statistical significance, and many others.

About the Author

Kilem L. Gwet, Ph.D.

Statistical consultant, mathematical statistician, researcher, and instructor. Over 20 years of experience in various industries, and several publications in peer-reviewed journals.
